

Volcano Project

Choose a volcano. Research its history. Include a photograph of the volcano, a map of its location, and other diagrams such as a cross section if possible.

When did it last erupt? What is its history of eruption?

What type of plate boundary is it near?

Did the eruption include lava, lahars, nuees ardentes, or pumice and ash?

Was there loss of life?

How was the environment affected?

Present your findings to the class. Your presentation can be in any format you like: Powerpoint/Prezi, Oral Presentation, Online media poster, handmade poster, model, etc.

Rubric

Information /10

Have you covered all of the questions above in detail?

Visuals /10

Have you included photographs, maps, and other diagrams?

Presentation /10

Have you clearly presented your information to the class?
